

WITHIN-SITE & WITHIN-DROP FLOCK BREEDING VALUES & BREECH SCORES 2017 Drop

Weaning Weight is displayed as **Flock Breeding Values (FBVs)**. FBVs express the expected performance of progeny of a sire relative to another sire in the evaluation when mated to the same standard of ewes. FBVs improve the accuracy of sire results because they account for the association between traits, adjustment for birth effects and the number of progeny a sire has in the analysis.

Breech traits are reported as deviations from the Sire Means and are based on the Visual Sheep Scores.

	WWT (kg)	BREECH COVER	BREECH WRINKLE
Anderson Poll, 120096	-0.4	0.0	-0.2
Centre Plus Poll, 407445	-0.8	-0.1	0.1
Connewarran, 015024	1.1	0.4	0.3
